# CONCRETE WATERPROOFING

One of the most common concrete difficulties in Bangalore is water leakage at Building construction structures. That this leaking water not only damages the structures but also hampers the artistic appearance. Thus, it causes progress of fungus and algae, dampness and also the peeling out paint or coating. Concrete is porous and lots of micro crack, that absorbs water naturally. That absorbs water contaminants, salt and other chemicals cause deterioration. In case you want to save your concrete and also make sure it has a durable life, waterproofing is essential.

Concrete Waterproofing is a system which prevents water from your concrete structure penetrating absorb water. Waterproofing method is very imperative as it benefits to preserve your house dry, healthy and safe. It makes sure to decrease moisture absorbs into the concrete and thereby protects concrete from damage produced due to humidity or water exposure. Water is compulsory for concrete curing. Similar, Water is extremely dangerous for concrete after curing. So that, concrete Water proofing is a very significant subject for living fine and healthy construction.

ProTech providing different types of waterproofing like Acrylic Waterproofing, Cementitious Waterproofing, Polyurethane Waterproofing, Bituminous Waterproofing and more.
